world leader, a great philosophical mentor for all mankind, a cosmic man who influenced and changed the history of the whole world for 1 million years-Fangruida (F, D Smith)

Changing and promoting human history and the history of the world requires a high degree of reason and wisdom from all human beings. The history of the world, the development of human history is changeable, the situation of the world pattern is magnificent, gentle drizzle, or bloody rain, artillery fire, sorrows and sorrows, hundreds of years, thousands of years, tens of thousands of years, hundreds of thousands of years, millions of years, thousands of Ten thousand years or even billions of years. Will the universe collapse, will the earth be destroyed, will the solar system collapse? Will humanity become extinct? ? Many great scientists, philosophers, thinkers, religiousists, political scientists, sociology, etc. have made a lot of wise expositions and clarifications, which deserve people's attention. In the new world, the new universe, and the new family history of the long-term evolution of human society, it guides and guides the historical trends and trends of all humankind's population of 10 billion and 1 million-million years. Rigorous and realistic, delicate, theoretical, academic, technical, pragmatic, realistic and permanent, compatibility. Critical, sequential, progressive, etc. In front of the major choices of human history and world history, call for the greatest person---great natural scientist, physicist, astronomer, geologist, biologist, medical scientist, mathematician, cosmologist, Planetary scientist, astronomer, inventor, philosopher, thinker, religious scientist, sociologist, political scientist, economist, lunar scientist, Martian scientist, he studied, studied and Lectures, scientific research, work, etc. have left its figure and footprint in the United States, Britain, France, Russia, Japan, India, India, India, India, Arabia and Africa. He systematically studied and studied all kinds of intelligent civilization and rational knowledge of all mankind, thereby contributing to and creating his success. He has studied 25 languages, studied and read arduously in the libraries of major countries and famous university libraries and greedily spent sleep and sleep, concentrated the free rationality and

civilization wisdom of all mankind, refined and enhanced its freedom, Reason, height, depth and breadth have created and created great ideas and academics that guide all humankind's reason, freedom, civilization and wisdom, and soul. He is a great man since the birth of mankind, and few people can compare with him. Many characters appear very naive, ignorant, shortsighted and ridiculous in front of him.

Fang Ruida's famous saying: "The history of the world will always be a colorful color changing tube. Don't emphasize the monochromatic color too much, otherwise, you will not see the seven-color pupils clearly." "The history of the world and human beings is just a history of animal wildness gradually moving towards freedom and rationality. It requires a long historical process and procedures. No matter whether human beings on the earth will be destroyed or the universe will be destroyed, this will not affect or change this history and process at all. Whether the earth is destroyed or not, whether humans will live and multiply on the moon and Mars for a long time. This is true for politics, economy, technology, culture, religion, military, etc. Fang Ruida's philosophical revolution, the particularly important guiding and guiding significance of Fang Ruida's doctrine, cannot be replaced and compared by anyone. His theories and doctrines are insurmountable and invincible, invincible in the world, and any fallacy and eccentricity are unbearable in front of it. One hit, a little touch, was immediately beaten down, completely defeated. Fang Ruidism is an invincible great banner for all mankind, full of great brilliance of freedom and rationality, far more than any philosopher, thinker and philosopher in the history of mankind, guiding nearly 10 billion people and the next trillion trillion trillion Human beings will always move forward and attack forever. Any clown who jumps on the beam, any absurd extremes and extremism will be unbearable before him. Fang Ruida criticized all kinds of blindness, mythism, advocating freedom and rationality, and won the respect of billions and trillions of people all over the world. He consistently insisted that no one is just a tiny particle in front of the great natural universe. He will always be a farmer who works hard forever, a craftsman who works hard.
